Nawras Mobile Fax and CSD for greater Business Convenience

Are you always on the move? Do you miss important fax messages while you are out of the office? If yes, then Nawras has the solution for you. Imagine having your faxes dropping into your mobile or having the ability to receive and send faxes while you drive around in your mobile office! That's what you get with Nawras' Mobile Fax and CSD (Circuit Switched Data) service.

Mobile Fax and CSD service can send faxes as well as receive fax messages from any other fax number worldwide, whether fixed or mobile. Important documents can be received or sent from any location; a car, a coffee shop or the beach can act as a temporary office.

The CSD service gives a new life to hand held monitoring devices. Previously considered as too expensive for daily operations, such monitoring devices are now back in action with a better performance thanks to Nawras coverage and easy on your budget with our pleasingly different prices.

The fax service is welcomed by companies who no longer need to wait for fixed line connections. Three types of hardware are offered to benefit from mobile fax.

The first hardware option is a fax-enabled handset. Customers can buy or download the relevant software to get started if their current handset is not already equipped to use this service.

The second choice is to purchase a wireless device that connects a standard fax machine to have an office or home fax service up and running in minutes. This device does not require any software or set-up and makes it easy to use wireless connectivity through a Nawras SIM-card anywhere in Oman.

The third option is a stand alone wireless, mobile fax machine with SIM-card. These are very similar in appearance to a standard fax machine but provide more mobility.

With the correct hardware in hand, customers simply visit any Nawras Store to request this convenient service and to have their Nawras SIM-card configured with the necessary settings to send and receive fax messages.

Faxes received on the mobile handset are stored in the mailbox and an alert is sent via SMS to let customers know that a fax is waiting. Received faxes can be printed using infrared or Bluetooth connections.

Now the office is truly mobile and business can be carried out more efficiently while on the move. Nawras Mobile Fax and CSD provide customers with the tools to deliver a faster, more efficient response time, contributing to improved productivity and a speedier decision-making process.
